- Procedure and Technique: Proper methods for administering medications?oral, injectable, topical, etc.
- Patient Safety: Monitoring for adverse reactions, allergies, and contraindications

- Legal and Ethical Responsibilities: Rights of medication administration, documentation, and informed consent

Common Types of NCLEX Style Questions in Medication Administration

Understanding the types of questions you may encounter can guide your study approach. Here are some common formats:

1. Multiple-Choice Questions (MCQs)

These questions present a scenario with four or five options, asking the examinee to select the best answer.

Example:

A nurse is preparing to administer a medication. Which action should the nurse take first?

- A) Verify the medication order with the provider
- B) Check the patient's allergies
- C) Confirm the medication dosage
- D) Explain the medication purpose to the patient

Correct Answer: B) Check the patient's allergies

2. Calculation Questions

Example:

A patient is prescribed 250 mg of medication. The stock solution contains 500 mg/10 mL. How much volume should the nurse administer?

Solution:

- Dose needed: 250 mg

- Stock concentration: 500 mg/10 mL

Calculation:

$$(250 \text{ mg} / 500 \text{ mg}) \times 10 \text{ mL} = 5 \text{ mL}$$

Answer: 5 mL

3. Select All That Apply (SATA) Questions

These questions test the ability to recognize all appropriate actions or considerations.

Example:

_A nurse is preparing to administer a new medication. Which of the following should the nurse do?
(Select all that apply)_

- Verify the medication order
- Check patient allergies
- Administer the medication immediately without verification
- Explain the purpose of the medication to the patient
- Document the administration after giving the medication

Correct responses: Verify the medication order, Check patient allergies, Explain the purpose, Document after administration

4. Priority Questions

Require the nurse to determine the most urgent action in a clinical situation.

Example:

A patient develops a rash after receiving medication. What should the nurse do first?

- A) Notify the healthcare provider
- B) Stop the medication
- C) Administer antihistamines

D) Document the reaction

Correct Answer: B) Stop the medication

Strategies for Answering NCLEX-Style Questions on Medication Administration
