Introduction to Triangular Norms in Fuzzy Logic

What Are Triangular Norms?

Triangular norms, or t-norms, are mathematical functions used to generalize the logical conjunction operation in fuzzy logic systems. Unlike classical logic, where conjunction is binary, fuzzy logic requires operators capable of handling degrees of truth within the interval [0, 1].

Definition: A t-norm is a binary operation $T: [0, 1] \times [0, 1] \rightarrow [0, 1]$ satisfying the following properties:

- Commutativity: $T(a, b) = T(b, a)$
- Associativity: $T(a, T(b, c)) = T(T(a, b), c)$
- Monotonicity: If $a \leq c$ and $b \leq d$, then $T(a, b) \leq T(c, d)$
- Boundary condition: $T(a, 1) = a$

These properties ensure that t-norms behave similarly to the logical AND operator but in a fuzzy context.
